## AN EVANGELIST FOCUSED ON DRIVING INDIGENOUS INNOVATIONS

Dr. Sudhir P Waghmare  
Founder

**G**reat leaders can help in both raising awareness of certain concepts and champion innovative ideas while inspiring others to be a part of the work, especially in the healthcare and public health sectors. These leaders are not only thoughtful and deliberate, but they're also willing to step outside of their comfort zones to try new things. With extensive industry knowledge, consistent motivation, and good business acumen, Dr. Sudhir P Waghmare established Shreeyash Electro Medicals with a focus on devising state-of-the-art life-saving equipment indigenously. Dr. Sudhir has been spearheading the company's operation with utmost due diligence, wherein, his leadership traits are displayed through establishing a good example for people to follow. Under his guidance, Shreeyash Electro Medicals has been in line with the 'Make-In-India' movement from a time when the term was not

even coined. They have always been at the forefront when it comes to manufacturing products that were previously not manufactured in India. For instance, they were the first Indian firm to manufacture baby incubators and neonatal ventilators in 1991 and 2004 respectively. Further, as there are no manufacturers of high-frequency oscillators, that is again where the company has been focusing its resources on devising this sophisticated ventilator.

### Setting New Benchmarks

Shreeyash Electro Medicals specializes in manufacturing and exporting a variety of ventilation products across varied specifications to satisfy the diverse needs of its valued clients. This equipment has saved thousands of lives across India.

"We have developed an innovative Human milk pasteurizer for which we have a patent. The product was developed in tandem with one of the hospitals in the USA (the University of California & Los Angeles) and two hospitals from Pune (Deenanath Mangeshkar Hospital & Research Center and King Edward Memorial Hospital). Currently, we are supplying this equipment worldwide due to its authenticity and effectiveness. It is one of the most portable and economically viable Human milk pasteurizers in the market today. This is possible only due to the association between the hospitals, research team, and the medical fraternity", says Dr. Sudhir, Founder at Shreeyash Electro Medicals.

Every product that Shreeyash Electro Medicals manufactures is unique and distinctive. There is no re-engineering involved; a complete ground-up approach

in devising products is what Shreeyash Electro Medicals believes in. Further, the company's philosophy or core principle has always been towards understanding the end result. What a particular equipment is supposed to do. So accordingly, it designs and develops technology and all other critical aspects right from the scratch.

"Our valued and seasoned employees are our most important asset whose combined experience has helped the company to reach where it is today. We believe in an open culture with utmost transparency and cohesiveness. And due to this, no employee has felt attrition and left the company in these last 31 years of existence. Further, the passion I have for devising these future-driven products has indirectly or directly inculcated in the entire organization. We are honest, sincere, and we persevere in whatever project we delve into", highlights Dr. Sudhir.

### **At Par With International Quality Standards**

Shreeyash has truly focused on the Atma Nirbhar Bharat concept through his focus on indigenous innovations in the critical healthcare sector. The company's focus has always been on developing products that meet international standards while remaining reasonably priced. The organization has been very mindful of the standard of the

given assembly. It utilizes premium-quality raw materials and adheres to stringent SOPs at every stage of production. This is supported by a cutting-edge infrastructure that is outfitted with cutting-edge machinery and technologies. Furthermore, Shreeyash Electro Medicals has assembled a team of experienced and qualified individuals who have been thoroughly trained to comprehend the diverse needs of esteemed clients.

### **Giving Back to Society**

Understanding what a cancer patient has to go through during the treatment process, Dr. Sudhir is utilizing his resources and expertise to devise robust equipment that will give the chemotherapy treatment an innovative and better approach. Shortly, it will be launched in the market. As a healthcare evangelist, Dr. Sudhir is on a promising mission to save lives and make healthcare services more reachable and affordable for the Indian population.

Shreeyash was one of the first companies in India to manufacture a Neonatal & Pediatric ventilator followed by making a High-Frequency Oscillatory Ventilator

### **Creating Difference**

Addressing the shortage of ventilators to aid the medical fraternity during the pandemic, Dr. Sudhir took part in the Marico Innovation Foundation's 'Innovate2BeatCOVID Grand Challenge' in June 2020. It was an ongoing challenge for manufacturers across India to devise a cutting-edge ventilator capable of making India Atmanirbhar. Dr. Sudhir took part in the 'Innovate2BeatCOVID Grand Challenge', and the ventilator was chosen as one of the best in India following extensive technical and clinical testing. MIF awarded him a grant to improve ventilator production in recognition of his idea. ||
